MASTER OPERATIONS PLAYBOOK

Peak 11 Media

The end-to-end system for selling, building, and managing websites for local Salt Lake City businesses.

$900 build + **$49/mo** management

Repeatable. Delegable. A new hire can run the business from this document.

Version 1.0 · June 2026 · Conscious Mirage DBA · Salt Lake City, UT

How To Use This Playbook

This is the single source of truth for Peak 11 Media. It covers the whole pipeline from a cold list of local businesses to recurring monthly revenue. Every stage lists the **exact steps**, **who owns each step**, and a **realistic time estimate**. If you do what is written here, in order, the business runs the same way every time — that is the entire point.

The three owners

Owner	What they own	Why
Nate (voice)	The 5-minute phone call only. Talking to humans, building rapport, closing.	Nate communicates by speech. His only job in this system is the live call.
Claude (AI)	Everything that is not a live human voice call: lead gen, list hygiene, building sites, email, Stripe links, contracts, domains, delivery, metrics.	100% of execution is automated. No manual digital steps.
Future hire	Eventually takes over the call (commission closer) and edit/management requests (VA), so the business runs without Nate's voice.	Makes the business sellable and truly delegable at scale.

The one rule that protects the whole business

Never text a prospect before they say yes on a call. No payment is ever collected on the phone. Payment is always an emailed Stripe link. These three rules keep us clean under Utah telemarketing law and the federal TCPA — one cold text can be a $500–$1,500 liability *per text*. Every person who ever works in this business must follow them.

The pipeline at a glance

Stage	Lead owner	Output / handoff
1. Lead Gen	Claude	List of qualified local businesses
2. Outreach	Claude → Nate	Interest-first cold call queued
3. The Call	Nate	A verbal YES to see a demo
4. Build	Claude	Their real site, live, in 24–48 hrs
5. Show & Close	Nate	Verbal commit to buy
6. Collect	Claude	Contract signed + Stripe paid
7. Deliver	Claude	Live on their domain + review ask
8. Manage	Claude / Hire	$49/mo recurring, low churn
9. Metrics	Claude	Weekly numbers → scale decisions

Each stage below is self-contained: read it, do it, hand off the output to the next stage. The build step references a separate **Build Runbook** (the step-by-step for assembling a site on our system).

Contents

1. Lead Generation

1 Where the leads come from

Goal: keep a queue of **local SLC-area businesses that clearly need a website and can afford one.** Leads are a consumable, not an asset — the list is always being refilled. Target a standing queue of **150+ qualified, un-contacted businesses** at all times.

Where to pull from

- **Google Maps (primary).** Search by trade + city: "roofer Salt Lake City", "electrician West Valley", "plumber Sandy", "landscaping Provo". Maps shows star rating, review count, phone, and whether a website is listed.
- **Yelp.** Second pass for the same trades; surfaces businesses with no site and exposes weak/old sites. Good for review counts.
- **Trade directories.** BBB, GAF/Owens Corning (roofers), Angi, HomeAdvisor, BuildZoom, the SLC Home Builders Association. These confirm the business is real, licensed, and active — and often list an owner name.
- **Facebook.** Many tradespeople run a Facebook page *instead of* a website — a perfect lead, because they already value being online but have no real site.

Best trades to target (high ticket, low web sophistication)

Tier	Trades	Why they convert
A (start here)	Roofing, electrical, plumbing, HVAC, concrete, fencing, contractors	High job value ($5k–$50k), reputation-driven, often no site or a broken one.
B	Landscaping, painting, garage doors, gutters, tree service, junk removal	Local, competitive, a clean site is a real edge.
C	Auto repair, detailing, cleaning services, movers, pest control	Steady volume, simple needs, easy same-day builds.

The qualification rubric

A business goes on the call list only if it passes **all four** gates. Claude scores each lead 0–5 (priority) and sorts the queue highest-first.

Gate	Pass condition	How Claude checks it
1. Web gap	No website, OR a dead/broken site, OR an outdated/ugly site (Wix-template, no mobile, no photos, GoDaddy parked page, Facebook-only).	Open the listed URL. No URL = top priority. Loads broken / not-mobile / looks 2010 = strong priority.
2. Reputation	4.0+ stars. Sweet spot is 4.5+ with 20+ reviews.	Read the Maps rating + review count. <4.0 or <5 reviews = skip.
3. Active	Open for business, answers the phone, recent reviews (within ~6 months), valid number.	Check 'recent reviews' and that hours are listed. Dead number = skip.

4. Affordable	Does real-money jobs (a $900 site is trivial vs. one job). Owner-operated or small team.	Trade + job size implies cash flow. Avoid franchises (corporate site) and pre-revenue startups.

The ideal lead, in one sentence

A 4.7-star roofer with 80 great reviews and either **no website** or a **broken one** — they have already earned the trust, they just have nothing online to capture it. That gap is the entire sales pitch. (Real example: Avalanche Roofing — 4.9 stars, 96 reviews, A+ BBB, broken site.)

How the list stays full

STEP	OWNER	TIME
Claude scrapes one new trade × one new city each working day (e.g. Mon = Sandy plumbers, Tue = Ogden electricians) into the leads CSV.	Claude	30 min
Claude enriches each row: owner name, direct phone, current site URL + screenshot, star rating, review count, priority score 0–5.	Claude	auto
Claude de-dupes against the master list and the suppression list (do-not-call / already-sold) so no business is ever hit twice.	Claude	auto
Claude refills the daily call sheet to the top 15–20 priority leads and hands it to Nate each morning.	Claude	10 min

Capacity math: SLC metro alone has thousands of qualifying tradespeople. At 20 fresh leads/day the list never empties. Provo, Ogden, and Park City are the next rings out. Lists are cheap and disposable — never ration them.

2. Outreach

2 Interest-first, call-led, fully compliant

Outreach is **phone-first**. The cold call is the engine; email is support. We lead with *interest*, never a pitch — the only goal of first contact is to earn permission to text them a live demo of their own site.

Channel roles

Channel	Role	Owner
Cold call	Primary. Earns the verbal yes and consent to text the demo. This is the whole game.	Nate
Text (SMS)	Used ONLY after a yes on the call, to send the live demo link. Never the first touch.	Claude
Email	Support / fallback. Warms up a lead before a call, follows up after, and reaches businesses we couldn't get on the phone. Always includes a Cal.com link so they request the call.	Claude

The portfolio-proof move (why this works)

Cold outreach normally fails because there is nothing to react to. We flip that: the moment someone shows the slightest interest on the phone, we say **"can I text you a link?"** and send a **live demo of their own business's site** — their name, their reviews, their photos, already built. Reacting to a real site that already exists is a completely different conversation than reacting to a pitch. This single move is our biggest close-rate lever.

> **Pre-built vs. build-on-yes**
>
> For **A-tier** leads (high value, clearly broken site), Claude pre-builds the demo *before* the call so Nate can text it live during the conversation — maximum impact. For everyone else, Nate gets the yes first and Claude builds within 24–48 hrs (Stage 4), then Nate calls back. Don't burn build time on leads that haven't shown interest — but always have a few A-tier demos ready.

Consent rules (non-negotiable, every operator)

Rule	What it means
No text before yes	We never send an SMS until the person verbally agrees on the call to receive the demo link. The yes is logged in the CRM with a timestamp.
No payment on the call	Nate never takes a card by phone. Payment is always an emailed Stripe link (Stage 6). This keeps us outside Utah telemarketing payment-on-call rules.
One-party recording disclosure	Calls ride a business line (OpenPhone) with recording on for hire training. Utah is one-party-consent, but the script still opens with a recording line so we're clean in any future metro.
Honor do-not-call	Any 'no' / 'remove me' goes straight to the suppression list. That business is never contacted again, on any channel.

CAN-SPAM on email	Every email has a real physical address in the footer and a working unsubscribe. (Address: the registered SLC CMRA box.)

Why this matters: a single cold text in the wrong state is a $500–$1,500 TCPA liability. The call-first, yes-then-text, email-fallback structure must survive every new hire and every script edit. It is the legal spine of the business.

3. The Call

3 The 5-minute interest-first script

Owner: **Nate** (or future commission closer). Time: **5 minutes target, 10 max.** The only goal of this call is a **verbal yes to receive a demo link.** We are not selling a website on this call — we are selling a 30-second look at something we already made for them.

The script

1 · Open (recording + pattern interrupt) — 15 sec

"Hey, is this [Owner]? Quick heads up, I record my calls. My name's Nate — I'm local here in Salt Lake. I'll be real quick, I'm <u>not</u> trying to sell you anything on this call. Do you have like 60 seconds?"

Why: recording line + 'not selling you anything' drops the guard immediately. Local + first name = human, not telemarketer.

2 · Interest hook (the reviews compliment) — 30 sec

"So I came across [Business] — you guys have like [X] reviews at [4.8] stars, that's honestly better than almost anyone in [trade] around here. I do websites for local trades, and when I went to look you up... [you don't have a site yet / your site's actually down right now]. Were you aware of that?"

Why: we open by praising what they're proud of (their reputation), then name a real, specific gap they probably don't know about. Curiosity, not pressure.

3 · The ask (permission to text the demo) — 30 sec

"Here's why I called — I actually went ahead and built a quick version of what a real site for [Business] could look like, using your reviews and your work. It's already live. Can I text you the link right now so you can look while we're on? What's the best number?"

This is the yes we need. The moment they say yes, Claude texts the live demo link. Now they're reacting to **their own site**, not a pitch.

4 · React together — 60–90 sec

"Scroll down — see how your reviews pull in right there, and your service area? That's live, that's real, I built it for you. What do you think?" *Then shut up and let them react.*

5 · Soft close to the next step — 30 sec

"If you like it, I can have it fully done and on your own domain in a day or two. It's [$900] to build and own it, plus [$49 a month] and I keep it updated, hosted, and handle any changes — you never touch it. Want me to send over the details and get it live?"

If yes: move to Stage 5/6 (Claude emails contract + Stripe link). *If 'let me think':* book a 10-min callback, leave the live demo with them.

Objection handling

They say	You say
"How much?" / "$900 is a lot"	"Totally fair. It's $900 once to build and own it — that's one or two jobs for you, right? — plus $49 a month and I handle everything: hosting, updates, any changes. Most sites charge that monthly and make you do the work. One new customer a year pays for it."

"I don't need a website"	"I hear that a lot — and you've clearly got referrals dialed. The thing is, people DO look you up before they call, and right now they find [nothing / a broken page] and your competitor who has a site. You already earned the reviews — let's actually capture them. Just look at the demo, no commitment."
"Just send me some info / email me"	"Happy to — but honestly the demo IS the info, it's faster to just look. Can I text you the link right now while we're on? Takes 20 seconds." (If still no: get the email, send demo link + Cal.com, log as warm.)
"My nephew / a buddy does websites"	"Love that — and if they're on it, awesome. But it's been [down / not built] for a while, right? Mine's already done and live. Look at it, and if your guy can beat it, no hard feelings. Want the link?"
"I'm busy / bad time"	"No problem, I'll be 20 seconds — can I just text you the demo so you've got it, and call you tomorrow at [time]?" (Book the callback, send the link.)

What to collect before hanging up (build inputs)

If they're interested, capture these so Claude can finalize the build with zero back-and-forth. Most are already in the lead row; confirm the starred ones live.

- **Best cell number*** to text the demo (and confirm consent logged).
- **Business email*** for the contract + Stripe link + receipts.
- **Domain status*** do they own a domain already? what is it? (we connect it / buy one).
- **Services to feature** their top 3–5 money services, in their words.
- **Service area** cities/zips they cover.
- **Photos** ask if they can text/email job photos; if not, Claude uses sourced/licensed.
- **Anything to fix/avoid** wrong hours, old phone number, a claim they can't make.

4. Build

4 Their real site, live, in 24–48 hours

Owner: **Claude.** Trigger: a verbal yes (or an A-tier pre-build). Output: a **live, real, mobile-perfect site** on our demo system, using the business's **actual** reviews, services, and photos. Turnaround: **same-day to 48 hours.** Full step-by-step lives in the **Build Runbook**; this is the operating summary.

> **Reference: the Build Runbook**
>
> The detailed, repeatable build steps (template setup, content blocks, review embedding, mobile QA, screenshot capture, deploy) are maintained separately as the **Build Runbook** so this playbook stays readable. A new hire builds from the Runbook; this section tells them *when* and *to what standard.* Build artifacts live per client in /clients/<business>/ (build-brief, assets, screenshots).

Build standard (non-negotiable)

- **100% real, zero fabrication.** Real reviews, real services, real license #, real hours. Never invent a review, an award, or a claim. Flag anything unconfirmed for owner sign-off (per Amphibian-style compliance discipline).
- **Mobile-first.** Most trade customers are on a phone. It must look perfect at 390px before anything else.
- **Their proof, front and center.** Star rating + best reviews + service area above the fold. The site exists to capture the reputation they already earned.
- **Fast + clean.** Loads in under 2 seconds, click-to-call button, clear services, simple contact form. No page-builders, no bloat — custom HTML/CSS.

Build pipeline

STEP	OWNER	TIME
Claude assembles the build-brief from the lead row + call notes: facts, services, reviews, service area, photos, anything to avoid.	Claude	15 min
Claude gathers assets — owner-supplied photos if any, otherwise licensed/sourced imagery + their logo; watermarks not needed (this is their real site).	Claude	15 min
Claude builds the site from the template per the Build Runbook (hero, services, reviews, about, service area, contact + click-to-call).	Claude	45–90 min
Claude QAs at 390 / 768 / 1440px, checks every link + the contact form, captures screenshots into /clients//screenshots.	Claude	20 min
Claude deploys to the demo host at a private per-business URL (root stays a blank Peak 11 page — prospects only see their own link).	Claude	10 min
Claude confirms the live URL loads on a real phone and queues it for Nate to text / show.	Claude	5 min

Privacy: the demo root URL is intentionally a blank "Peak 11 Media" page with no directory listing, so no prospect can browse other businesses' demos. Each lead only ever receives their own link.

5. Show & Close

5 "Your reviews are great — your site is broken"

Owner: **Nate** (or closer). This is the callback (or the live tail of the first call for A-tier). The site is now live; we walk them through it and close. Time: **5–10 min.**

The walk-through

- **Open on their phone.** "Pull up that link I sent — that's live, that's your actual site." Reacting beats describing.
- **Point to their proof.** "See your 4.8 and these reviews pulling in? Your service area, your services, click-to-call right there."
- **The core close.** "Here's the deal — your **reviews are great**, your reputation's better than your competition. But right now your site's **[broken / nonexistent]**, so all that trust is leaking. This fixes it today."

The money framing

> **Say it exactly like this**
>
> "It's **$900 to build it and you own it outright** — that's one or two jobs for you. Then **$49 a month** and I host it, keep it updated, and make any changes you ever want — you literally never have to touch it. I'll send you a quick agreement and a payment link right now, and I'll have it on your own domain and fully live by [tomorrow]."

Anchor the value: $900 once vs. a single roofing/HVAC job. $49/mo vs. doing it themselves or paying an agency $150–300/mo. Frame $49 as 'I handle everything,' not 'a fee.' One new customer a year covers the entire year.

Lock the commitment

STEP	OWNER	TIME
Get a clear verbal yes to both the $900 build and the $49/mo management.	Nate	1 min
Confirm: business legal name, billing email, domain status (own one? which? or do we buy it).	Nate	2 min
Tell them exactly what happens next: "You'll get an email in 5 minutes — sign the one-page agreement, pay the link, and I'll have you live by tomorrow."	Nate	1 min
Hand off to Claude immediately (Stage 6) — strike while it's hot.	Nate	—

> **Closing discipline**
>
> No card numbers over the phone — ever. The close on the call is the **verbal commit**; the contract + Stripe link (Stage 6) is where money moves. This is both the law (Utah telemarketing) and better business — a signed contract before payment protects everyone.

6. Collect

6 Contract first, then Stripe — within 5 minutes

Owner: **Claude.** Trigger: Nate's verbal-commit handoff. Speed is everything — the link should hit their inbox within **5 minutes** of hanging up, while the demo is still on their screen.

Order of operations (do not reorder)

STEP	OWNER	TIME
Claude sends the one-page service agreement for e-signature first (named party: Conscious Mirage DBA Peak 11 Media; scope, $900 + $49/mo, ownership-on-final-payment, cancellation terms).	Claude	2 min
On signature, Claude sends the Stripe payment link in the same thread.	Claude	1 min
Client pays. Stripe auto-receipt fires. Webhook flags the deal 'paid' in the CRM.	Claude	—
Claude starts the $49/mo Stripe subscription on the same customer (Smart Retries / dunning ON for failed cards).	Claude	1 min
Claude saves the evidence pack: signed contract, demo URL, payment record, consent log — into /clients//.	Claude	auto

Payment terms

Option	Terms	When to offer
Full upfront	$900 now + $49/mo subscription starts at go-live.	Default. Offer a small nudge (e.g. first month management free) for paying in full.
50% deposit	$450 to start the build, $450 due before go-live; $49/mo starts at go-live.	Only if needed to close. Build proceeds on deposit; site does not go live on their domain until paid in full.

Stripe / brand setup notes

- **Account.** Conscious Mirage Stripe. Products: **Website Build $900** (one-time), **Website Management $49/mo** (subscription).
- **Statement descriptor.** Set to something the client will recognize (e.g. 'PEAK11 MEDIA') — unrecognized descriptors are a top chargeback + Stripe-review trigger.
- **Legal party.** A Utah DBA links the brand 'Peak 11 Media' to the legal entity so the contract, Stripe, and CAN-SPAM footer all name the same party.
- **Dunning.** Smart Retries + card-expiry pre-emails ON — involuntary churn (declined cards) is 20–40% of all churn and the cheapest to prevent.

> **Dispute defense (protect the Stripe account)**
>
> A frozen Stripe account is total revenue stoppage. Keep dispute rate <0.5%: recognizable descriptor, signed contract on file, delivery confirmation logged, and a fast, reasonable response to any complaint. The evidence pack per client exists for exactly this.

7. Deliver

7 Go live, confirm, ask for review + referral

Owner: **Claude.** Trigger: payment confirmed (or deposit + final per terms). Get them **live on their own domain** fast, confirm it, then immediately convert the goodwill into a Google review and a referral.

Go-live pipeline

STEP	OWNER	TIME
Domain: if they own one, Claude connects it (DNS / nameservers) via browser automation. If not, Claude registers one (~$12/yr) in their name.	**Claude**	20–40 min
Claude moves the site from the private demo URL to their live domain, with SSL/HTTPS on.	**Claude**	15 min
Claude does final live QA: loads on real phone + desktop, click-to-call works, contact form delivers to the owner's email, all info correct.	**Claude**	15 min
Claude sets up the contact-form forwarding + a simple uptime check so we know instantly if the site ever goes down.	**Claude**	10 min
Claude sends the launch-confirmation email: live URL, what's included, how to request changes, and the review + referral ask.	**Claude**	5 min

Launch email (template)

"**You're live!** [domain] is up and looks great on phone and desktop. Here's what you've got: [reviews, services, click-to-call, contact form straight to your inbox]. Want a change anytime? Just reply to this email or text me — it's included.

Two quick favors that genuinely help: (1) if you're happy, a **Google review** for me means the world — [review link]. (2) Know another [trade] or local owner who needs a site? Send them my way — I'll take great care of them."

> **Why the review + referral ask is built into delivery**
>
> The happiest moment is the second they see their site live — that is when reviews and referrals happen. Referrals from a satisfied local owner are the cheapest, highest-converting leads we get, and they compound. Never skip this step.

8. Manage ($49/mo)

8 Recurring revenue, low churn, low touch

Owner: **Claude** today, **future VA hire** at scale. The $49/mo is the engine of the business — it turns one-time $900 builds into compounding MRR. The whole promise is "**you never touch it.**"

What the $49/mo covers

- **Hosting + domain + SSL** kept paid and current, always online.
- **Uptime monitoring** we know before they do if anything breaks, and fix it.
- **Content edits** phone, hours, services, photos, seasonal updates — reasonable changes included (fair-use cap of ~2 edit requests/month; bigger overhauls quoted).
- **Security + updates** SSL renewals, form spam protection, small fixes.
- **New reviews refresh** periodically pull their latest Google reviews onto the site.
- **A real human to ask** reply by email or text, done within ~1 business day.

How edit requests are handled

STEP	OWNER	TIME
Client emails or texts a change request to the support line.	Nate/Hire	—
Claude triages: in-scope edit → do it; out-of-scope (new pages, redesign) → quote a one-time add-on.	Claude	5 min
Claude makes the change, QAs on mobile, redeploys.	Claude	15–30 min
Claude replies 'done — here's the live change' the same or next business day.	Claude	5 min

Response speed is the retention lever. Fast, friendly turnaround on small requests is why a $49/mo client stays for years. The edit cap protects margin without ever feeling stingy on normal requests.

Retention (keep churn low)

- **Deliver value they can see.** Occasionally email 'I refreshed your reviews / sped up your site' — proactive touches remind them what they pay for.
- **Kill involuntary churn.** Stripe Smart Retries + card-expiry reminders. Most cancellations are dead cards, not unhappy clients.
- **Make leaving cost something.** They *own* the $900 site, but the domain connection, hosting, and edits are the management — leaving means going dark or doing it themselves.
- **Win-back.** If someone cancels, Claude sends a friendly 'site's still here when you're ready' and a one-month-free win-back 30 days later.

The MRR math

Every closed client adds **$49/mo** forever (minus churn). At ~5% monthly churn, 100 managed clients = ~$4,900/mo recurring on top of new $900 builds. This is what makes Peak 11 a **business**, not a series of one-off projects. Protect the recurring base above all.

9. Metrics

9 Track weekly, decide with numbers

Owner: **Claude.** Updated every working session into the metrics file. These numbers — not opinions — decide which trades, cities, and scripts get more volume.

What to track (the funnel)

Metric	Definition	Healthy benchmark
Calls made	Dials Nate/closer completes per day.	20–30 / day
Connects	Calls that reach a decision-maker.	~30–40% of dials
Interested	Said yes to receiving the demo link.	20–35% of connects
Demos built	Live sites built for interested leads.	= interested (A-tier pre-built)
Closes	Signed contract + payment collected.	30–50% of engaged demos
Build → live	Days from yes to live on their domain.	1–2 days
New build rev	$900 × closes that month.	track monthly
Active mgmt	Clients paying $49/mo right now.	grow every month
MRR	Active mgmt × $49.	the north-star number
Churn	% of mgmt clients lost / month.	<5% / month
Reviews / referrals	Google reviews + referred leads from clients.	≥1 per 2 closes

Targets: the path to $5k, then $20k/mo

Milestone	What it takes	Monthly mix
First $5k/mo	~6 builds/mo at $900 ≈ $5,400, OR a blend of new builds + a growing $49/mo base. Reachable solo (Nate calling, Claude executing).	~6 closes/mo + climbing MRR
$5k → $10k/mo	Steady ~8–10 builds/mo plus a management base of 60–100 clients (~$3–5k MRR). Add Provo/Ogden lead volume.	$7–9k builds + $3–5k MRR
$20k/mo	Hire a commission closer (frees Nate's voice) + a VA for edits/management. ~12–15 builds/mo (~$13k) + 150–200 mgmt clients (~$7–10k MRR).	$11–13k builds + $7–10k MRR

The lever that gets to $20k: recurring beats one-off

New builds are linear — more revenue needs more calls. **MRR compounds** — every month's closes stack on last month's base. Past ~$10k/mo, the focus shifts from 'sell more builds' to '**protect and grow the $49/mo base while a closer and VA carry the build volume.**' That is how Peak 11 scales past Nate's personal time.

Weekly review ritual (15 min, Claude-prepared)

- **Update the funnel table** with the week's numbers.
- **Find the bottleneck** which stage has the worst drop-off? Fix that one thing.
- **Double down** shift call volume to the trade/city with the best connect→close rate.
- **Check MRR + churn** is the recurring base growing net of churn? If not, fix retention first.

Appendix — Quick Reference

Who does what

Stage	Nate (voice)	Claude (AI)	Future hire
Lead gen	—	Scrape, qualify, enrich, queue	—
Outreach	Cold call	Demo text, email, Cal.com	Closer (calls)
The call	Run script	Hand call sheet, log CRM	Closer
Build	—	Build + QA + deploy	—
Show/close	Walk-through + close	Pre-build, queue demo	Closer
Collect	Hand off	Contract + Stripe + evidence	—
Deliver	—	Domain, go-live, launch email	—
Manage	—	Edits, hosting, retention	VA (edits)
Metrics	—	Track + weekly review	Ops mgr

The non-negotiables (print this on the wall)

Compliance + quality spine

1. **No text before a verbal yes** (TCPA).
2. **No payment ever collected on a call** — always an emailed Stripe link (Utah telemarketing).
3. **Contract signed before payment**, payment before go-live on their domain.
4. **Honor every do-not-call / unsubscribe** instantly, forever.
5. **Zero fabrication** — only real reviews, services, and claims.
6. **Recognizable Stripe descriptor + signed contract on file** — keep dispute rate under 0.5%.

Key numbers

Item	Value
Build price	$900 one-time (client owns the site)
Management	$49 / month (hosting, edits, updates, support)
Turnaround	Same-day to 48 hours, yes → live
Qualification	Web gap + 4.0+ stars + active + can afford
Standing lead queue	150+ qualified, un-contacted
Daily call target	20–30 dials
Churn target	<5% / month
First milestone	$5k/mo (~6 builds + growing MRR)
Scale milestone	$20k/mo (closer + VA, ~12–15 builds + $7–10k MRR)

Peak 11 Media — Master Operations Playbook v1.0. Internal operating document. Pair with the **Build Runbook** for the step-by-step site build. Update the metrics file every working session; update this playbook whenever a step changes.
