Financial Model — The Path from \$0 to \$5k/mo to \$20k/mo

How a custom website business with a recurring care plan compounds into passive monthly income. All numbers are research-grounded and adjustable in the companion spreadsheet. Updated June 2026.

The headline (Realistic scenario)

\$5k/mo total revenue is reached in **~month 1** — driven by 5-9 builds a month at ~\$1,050 each.
\$20k/mo total revenue lands around **~month 12** as build volume scales and the care book compounds.
The truly passive part — recurring care-plan income — reaches **~\$2,487/mo** by month 12 (~51 active plans). **\$5k of pure passive MRR ≈ 102 plans; \$20k MRR ≈ 408 plans.**

1. Inputs & Assumptions

Every figure below is an editable cell on the **Assumptions** tab of the spreadsheet; the whole model recalculates from them. Numbers are grounded in Peak 11's actual pipeline (205 qualified leads on hand) and outreach research benchmarks.

Lever	Value	Basis
Avg one-time build fee	\$900 – \$1,200 (model: \$1,050)	Starter \$900 / Standard \$1,200 blended
Care plan	\$49 / mo	Hosting + edits + support; the recurring asset
Care-plan attach rate	40%	Share of new clients who take the plan
Close rate — cold contacted	~3% (2.5% / 3% / 3.5%)	Blended across all contacted leads
Close rate — demo-engaged	up to 20–60%	Prospects who view a free demo build close far higher
Monthly care-plan churn	3%	Plans cancelled per month
Domain	~\$12 / yr per client	Billed through to client — net ~\$0
Hosting	\$0	GitHub Pages — free
Stripe processing	~3%	On all collected revenue
Closer commission	10–20% (model 15%)	On one-time build revenue only
Virtual assistant	\$400–800 / mo (model \$600)	Lead-gen + admin
Tooling	~\$0	Near zero

Why the close rate matters most

At a cold 3% close rate, 1 in 33 contacted leads becomes a client. But prospects who engage with a **free demo build** close at 20–60%. Every lever in this model is dwarfed by getting demos in front of people — that single move can 5–10x the entire revenue line.

2. Monthly Build-Up Model (12 Months)

The mechanism: **leads contacted** → **closes** → **one-time build revenue + new care plans** → **cumulative MRR (compounds month over month)** → **total monthly revenue**. The MRR column (green) is the engine — it only ever grows as the client book stacks, net of a small 3% churn.

Realistic scenario (3% close; Nate closing + a VA feeding leads)

Mo	Leads	Closes	New plans	Active plans	MRR	One-time	Total rev
1	180	5.4	2.2	2	\$106	\$5,670	\$5,776
2	220	6.6	2.6	5	\$232	\$6,930	\$7,162
3	260	7.8	3.1	8	\$378	\$8,190	\$8,568
4	300	9.0	3.6	11	\$543	\$9,450	\$9,993
5	340	10.2	4.1	15	\$727	\$10,710	\$11,437
6	380	11.4	4.6	19	\$928	\$11,970	\$12,898
7	420	12.6	5.0	23	\$1,147	\$13,230	\$14,377
8	460	13.8	5.5	28	\$1,383	\$14,490	\$15,873
9	500	15.0	6.0	33	\$1,636	\$15,750	\$17,386
10	540	16.2	6.5	39	\$1,904	\$17,010	\$18,914
11	580	17.4	7.0	45	\$2,188	\$18,270	\$20,458
12	620	18.6	7.4	51	\$2,487	\$19,530	\$22,017

Year-1 total revenue ~\$164,860. Total revenue crosses \$5k in month 1 and \$20k in month 12. Bold = month total tops \$5k; red = tops \$20k.

Conservative scenario (2.5% close; solo Nate, no hires)

Mo	Leads	Closes	New plans	Active plans	MRR	One-time	Total rev
1	120	3.0	1.2	1	\$59	\$3,150	\$3,209
2	140	3.5	1.4	3	\$126	\$3,675	\$3,801
3	150	3.8	1.5	4	\$195	\$3,938	\$4,133
4	160	4.0	1.6	5	\$268	\$4,200	\$4,468
5	170	4.2	1.7	7	\$343	\$4,462	\$4,806
6	180	4.5	1.8	9	\$421	\$4,725	\$5,146
7	190	4.8	1.9	10	\$502	\$4,988	\$5,489
8	200	5.0	2.0	12	\$584	\$5,250	\$5,834
9	210	5.2	2.1	14	\$670	\$5,512	\$6,182
10	220	5.5	2.2	15	\$758	\$5,775	\$6,533
11	230	5.8	2.3	17	\$848	\$6,038	\$6,885
12	240	6.0	2.4	19	\$940	\$6,300	\$7,240

Year-1 ~\$63,725. Reaches \$5k/mo total around month 7; ending MRR ~\$940 (~19 plans). \$20k/mo is not reached in year one at solo capacity — that ceiling is exactly why you hire.

Optimistic scenario (3.5% close; dedicated closer + VA, full-time outbound)

Mo	Leads	Closes	New plans	Active plans	MRR	One-time	Total rev
1	250	8.8	3.5	4	\$172	\$9,188	\$9,359
2	320	11.2	4.5	8	\$386	\$11,760	\$12,146
3	400	14.0	5.6	13	\$649	\$14,700	\$15,349
4	480	16.8	6.7	20	\$959	\$17,640	\$18,599
5	560	19.6	7.8	27	\$1,314	\$20,580	\$21,894
6	640	22.4	9.0	35	\$1,714	\$23,520	\$25,234
7	720	25.2	10.1	44	\$2,156	\$26,460	\$28,616
8	820	28.7	11.5	54	\$2,654	\$30,135	\$32,789
9	920	32.2	12.9	65	\$3,205	\$33,810	\$37,015
10	1020	35.7	14.3	78	\$3,809	\$37,485	\$41,294
11	1120	39.2	15.7	91	\$4,463	\$41,160	\$45,623
12	1220	42.7	17.1	105	\$5,166	\$44,835	\$50,001

Year-1 ~\$337,918. \$5k/mo from month 1, **\$20k/mo by month 6**, ending MRR ~\$5,166 (~105 plans).

3. The MRR Engine — How \$49/mo Becomes Passive Income

One-time builds are lumpy income — you eat what you kill each month. The **care plans are the asset**: each one adds \$49/mo that recurs with almost no ongoing work. Stack enough of them and the business pays you whether or not you sell anything new that month.

Active care plans	Recurring MRR	Milestone
25	\$1,225	
50	\$2,450	
75	\$3,675	
100	\$4,900	≈ \$5k/mo — passive (≈102 plans)
150	\$7,350	
200	\$9,800	
300	\$14,700	
408	\$19,992	≈ \$20k/mo — passive

The compounding rule of thumb

At a 40% attach rate, roughly **every 2.5 builds you close adds one \$49/mo care plan**. Close ~10 builds/mo and you add ~4 plans/mo to the book; the recurring line climbs ~\$196/mo and never resets. After 18–24 months of steady selling, the care book alone can clear \$5k/mo — that is the passive, sellable asset Peak 11 is really building.

4. Hire Break-Evens — When Each Role Pays for Itself

Virtual Assistant — \$400–800/mo

- Gross profit per build after Stripe + commission ≈ **\$861**.
- At \$600/mo, the VA breaks even by enabling just **~0.7 extra builds/mo** — or **~12 active care plans** of recurring income.
- In practice a VA running lead-gen frees the closer to make far more than one extra build a month, so the VA is strongly net-positive once you are closing ~3+ builds/mo.

Closer — 10–20% commission (performance-based)

- A closer is paid only on results: ~\$158 per build at 15%.
- Peak 11 nets **\$861** per build the closer lands — so the closer is **self-funding from the very first close**; break-even is immediate.
- Every build the closer brings also seeds a recurring care plan at ~40% attach — pure upside on top of the commission math.

Hiring sequence

Stay solo to ~\$5k/mo. Add a commission **closer first** (zero fixed cost, immediate break-even) to lift volume, then a **VA** to keep the lead pipeline full once you are reliably closing. With both in place, the Optimistic path to \$20k/mo opens up.

5. The Headline — Realistic Timeline & What It Takes

Scenario	Close	\$5k/mo (total)	\$20k/mo (total)	MRR @ mo 12	Active plans @ mo 12	Year-1 revenue
Conservative	2.5%	mo 7	12+	\$940	19	\$63,725
Realistic	3.0%	mo 1	mo 12	\$2,487	51	\$164,860
Optimistic	3.5%	mo 1	mo 6	\$5,166	105	\$337,918

What the realistic path takes

To \$5k/mo (~month 1): close ~5–6 builds that month from ~180–220 leads contacted, plus a small but growing care book. Solo and doable.

To \$20k/mo (~month 12): close ~17–19 builds/mo from ~600 leads contacted, with ~50 care plans recurring underneath. This needs leverage — a commission closer and a VA — because it is more outreach than one person can run.

The key drivers, in order: (1) get free demos in front of prospects to lift the close rate, (2) protect the 40% care-plan attach so MRR compounds, (3) add a closer then a VA to scale contact volume, (4) keep churn low — every retained plan is permanent income.

Peak 11 Media — internal financial model. Companion spreadsheet: Peak11-Financial-Model.xlsx (edit the yellow assumption cells to re-run any scenario).
